## To Haereticus Environmental Laboratory

We wish to thank you for accepting our invitation for Craig Downs and his colleagues to conduct ecotoxicological research on the effects of destructive chemical fishing practices (e.g., cyanide fishing) and agrichemical fungicides on coral larval development.

We also thank Haereticus for donating to the Marine Science Station scientific equipment to conduct further ecotoxicological studies.

We hope that you can come again to further enhance collaboration and push forward the scientific advancement in the ecotoxicology field to help better manage and preserve the coral reefs in Aqaba and the rest of the world. We also hope that you can support further visits of Craig to our institute to help training our staff.

Marine Science Station,

Dr. Fuad A. Al-Horani
